

Christmas Crafts from Around the World

Even though the holidays are different this year due to pandemics and the current world landscape, this does not mean that you can't enjoy the holiday season with your family. We are sharing and providing fun-filled crafts you can make with your little ones. We are here to provide your kids with an opportunity to understand what celebrating holidays in each home worldwide is like.

AUSTRALIA

December is the first month of Summer in Australia, which means Christmas is HOT! In December, Australia experiences some of its hottest temperatures ranging from the mid-20s Degrees Celsius (70 Fahrenheit) to above 30 Degrees Celsius (86 Fahrenheit). The climate means people spend their Christmas mornings down at the beach in some places, and in other areas, families stay inside with their air-conditioning on.

Sand Snowmen

Using kinetic sand or moon sand, make a snowman!

Materials:

Store-bought kinetic sand or moon sand works perfectly. You can also make homemade sand using flour and baby oil. Use 1/4 cup baby oil for every 2 cups of flour. To fill our plastic container, we did 8 cups of flour and 1 cup of baby oil. You want to mix it well to break up any balls of baby oil that form. Store it in an airtight container when not in use. It looks like snow!
